

Stabilo 2

Adj. w/gas fitted struts

Walker with Upper Body padded Support Plate for greater stability and rehabilitation use

Built with padded forearm support and handles for easy grip control and upper body strengthening, this walker has an inside spread of 40cm allowing good space for all sizes.

The forearm padded frame is extra wide for greater support and stability. The frame is quickly and easily adjusted for height and is standard in size for health care regulations and also for home use.

Robust performance for greater stability!

The front handles are long for easy grip and are tilted for a natural holding position and are adjustable. The back wheels are also equipped with an easy click braking system. It also comes with an easy access metal basket for storage.

The **STABILO 2** has a heavy duty frame made from solid stainless steel and with the gas fitted strut, can easily extend up to 135cm high. This walker is also suitable for the very tall (up to 220cm) and can support a weight of up to 150kg.
